“the Greeks, surpassing all in genius, appropriated most of the earliest stories, and then variously decked them out with ornaments of tragic phrase, and adorned them in every way, with the purpose of charming by the pleasant fables. Hence Hesiod and the celebrated Cyclic poets framed theogonies of their own, and battles of the giants, and battles of Titans, and castrations; and with these fables, as they travelled about, they conquered and drove out the truth.

'But our ears having grown up in familiarity with their fictions, and being for long ages pre-occupied, guard as a trust the mythology which they received, just as I said at the beginning; and this mythology, being aided by time, has made its hold difficult for us to escape from, so that the truth is thought to be nonsense, and the spurious narrative truth.”

Epeis: *“The first and most divine being is a serpent with the form of a hawk, extremely graceful, which whenever he opened his eyes filled all with light in his original birthplace, but if he shut his eyes, darkness came on.”*

'Epeis here intimates that he is also of a fiery substance, by saying “he shone through,” for to shine through is peculiar to light.'

Moreover the Egyptians, describing the world from the same idea, engrave the circumference of a circle, of the colour of the sky and of fire, and a hawk-shaped serpent stretched across the middle of it, and the whole shape is like our Theta (θ), representing the circle as the world, and signifying by the serpent which connects it in the middle the good daemon.

From Tauthus, as is said above, all received their impulse towards physiological systems: and having built temples they consecrated in the shrines the primary elements represented by serpents, and in their honour celebrated festivals, and sacrifices, and mystic rites, regarding them as the greatest gods, and rulers of the universe. So much concerning serpents.
